The sale of public and social housing has been a major aspect of housing policies in recent decades. Privatisation and a general retreat by governments from the housing arena have pushed up sales; this has been particularly evident within Eastern European countries and China but is also taking place in many Western European countries and Australia. Wherever it occurs, such privatisation has lead to new challenges for housing management. Many estates are now a mix of public and private, raising questions about the division of responsibilities between different owners. Legislation to address this is not adequate and public managers are still hampered by the bureaucratic mechanisms within their organisations, while the new owners are not used to their responsibilities for maintenance. Added to this are the limited financial resources for renewal and maintenance among both public and private owners at a time when the need for investments is urgent, especially within the massive housing estates dating from the communist era. Experts from Australia, France, the Netherlands, UK, Switzerland, China, the Czech Republic, Moldavia, Russia, Serbia and Slovenia present their county's context and the policies and practice for managing privatised housing, together with case studies illustrating the issues described. How privatised public housing is managed is of international concern, which will benefit from an international exchange of knowledge and best practice. The comparative analysis offered in Management of Privatised Housing: International

Real Estate Management Law

The Landlord Entrepreneur

This handbook introduces a methodical approach and pragmatic concept for the planning and design of changeable factories that act in strategic alliances to supply the ever-changing needs of the global market. In the first part, the change drivers of manufacturing enterprises and the resulting new challenges are considered in detail with focus on an appropriate change potential. The second part concerns the design of the production facilities and systems on the factory levels work place, section, building and site under functional, organisational, architectural and strategic aspects keeping in mind the environmental, health and safety aspects including corporate social responsibility. The third part is dedicated to the planning and design method that is based on a synergetic interaction of process and space. The accompanying project management of the planning and construction phase and the facility management for the effective utilization of the built premises close the book.

Management, a Bibliography for NASA Managers

Department of Transportation and Related Agencies Appropriations for 2003: 2003 budget justifications

Previously known as Estate Management Practice, the fourth edition of this work has been renamed to reflect current market practice and to embrace the discipline of corporate real estate. This book provides a comprehensive study of the management of urban property and is divided into three parts. Part one considers the diverse nature of the many types of estates and different aspects and interpretations of the management task. Part two concentrates on the management of leased property, repairs, service charges and rent reviews and the statutory framework within which the landlord and tenant relationship has developed. Part three is concerned with the positive management covering both technical skills, such as portfolio performance, and the professional practice environment in which they are exercised. Stapleton’s Real Estate Management Practice is written both for advanced students and practitioners. It provides a firm basis for management affecting the decision-making hierarchy from tenant to property, to portfolio, to proprietary unit. While retaining the format of previous editions, it has been updated to reflect the many changes in the law, practice, technology and the market place since the previous edition. In addition, this new edition highlights factors that influence the enhancement of different types of property and the various strategies involved in managing properties from both owners’ and occupiers’ point of view.

The German real estate market is in motion. Single real estates as well as parts of real estate portfolios are still projected and brought to the market to a great extent. In addition, the ownerships of big real estate portfolios are changing. In the light of this situation, this book guides foreign investors and project developers through the legal, tax and economical requirements for real estate investments in Germany in a practical manner.

Encyclopedia of Information Science and Technology, Second Edition

From the author of the real estate investment bible Buy It, Rent It, Profit! comes a fresh guide to teach new and aspiring landlords how to go from managing a single rental property to successfully managing a large rental portfolio. In his first book, real estate expert Bryan Chavis created the ultimate how-to guide for buying and managing rental properties, with practical, realistic ways to build lasting, long-term wealth. Now, he takes his acclaimed program one step further. The Landlord Entrepreneur shifts the focus from dealing exclusively with residential real estate to building a dynamic property management business. By following the step-by-step instructions in this new guide, anyone can create a fully functioning, professional property management company in only ten days. With Chavis’s modern take on real estate, you will learn the five phases of property management and the skills needed to successfully move through them—as well as the hacks and tricks to build your profitable business from the ground up. Full of smart, practical business advice, The Landlord Entrepreneur is the only guide you need to become a successful property manager in today’s real estate market.

Air Force Manual
Integration of processes and supporting IT tools is a key factor for successful Facility Management. After a review of the present situation of Facility Management the author describes an integrated process model for the conception, planning and construction processes of facilities, providing integration into the whole life cycle. The target costing method is presented as a means to grant proper conception, planning and construction in accordance with the needs of the investor, the user and the operator. To be able to provide figures for the target costing methodology, a concept for efficient IT process support during the utilisation phase is developed. This includes two levels: the operative level and the controlling level based on the data of the operative processes. The concept is based on standard reference models of the key FM processes of the utilisation phase and on an analysis of the existing functionality of the relevant IT tools. A concept for the integration of existing IT tools is presented, that provides the necessary interaction and data exchange to support the newly introduced parts of the workflow. Based on this integration unified objects are defined, combining the distributed information of the FM business objects. This results in a joint FM database structure. The support of the operative processes and the joint data structure enable standardised calculation of benchmarks for controlling purposes. Finally, these benchmarks are the basis for a statistical method that allows the calculation of the utilisation costs in the conception phase.

International Journal of Micrographics & Optical Technology

Hotel Law, Transactions, Management and Franchising presents a practical guide to the issues that face lawyers and industry leaders working in the hospitality field. It aims to develop the reader’s understanding of the acquisition process and the complex relationships in management and franchise deals that dominate the hotel industry. This text is written primarily as a desktop reference for legal practitioners working in the hotel law field and is also suitable for students studying towards hotel and hospitality careers both at an undergraduate and law school or graduate level. The highly experienced author, contributors and editors offer insights into the industry players and their preferred positions, desired outcomes, and the potential pitfalls that can ensnare even the most well-planned deals. With broad coverage of the rapidly growing field of hospitality law—including gaming, recreation, and amenities— the book’s approach examines the dominant models of hotel ownership, management and franchising, and includes independent hotels and the move towards complex resorts. The book’s coverage of key legal topics ranges from real estate, to intellectual property, contracts, and finance. Hotel Law will give readers an understanding of the hospitality industry from the perspective of the transactional practitioner, while examining the multi-party relationships and agreements that develop between an owner, operator, licensor and lender.
